AMENDMENTS TO THE CLAIMS

Docket: 14416

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

 (Currently Amended) A method of raising finishing swine and producing pork belly products, the method comprising:

feeding a daily feed ration to a pig, the daily ration comprising <u>about</u> 0.5 to <u>less than about</u> 5 percent by weight hydrogenated poultry fat <u>greater than about 35</u>;

slaughtering the pig and harvesting a pork belly from the pig;

injecting the pork belly with flavoring and cooking the pork belly to a predetermined temperature;

pressing the pork belly into a predetermined shape; and slicing the pork belly into bacon slices.

- (Original) The method of claim 1 wherein the hydrogenated poultry fat is hydrogenated chicken fat.
- (Original) The method of claim 1 wherein the feeding step is performed on a daily basis for between about three and about eight weeks prior to slaughtering the pig.
- (Original) The method of claim 1 wherein the feeding step is performed on a daily basis after the pig has reached a weight of between about 100 and about 170 pounds.
- (Currently Amended) The method of claim 1 wherein the hydrogenated poultry fat has an iodine value of between greater than about 35 and less than about 60-and-about 39.
- (Currently Amended) The method of claim 1 wherein the hydrogenated poultry fat has an iodine value of greater than about 35 and less than about 45.

Application Number: 10/607,837 Reply to Final O.A. of October 16, 2006

7. (Original) The method of claim 1 wherein the feed ration further includes a second

Docket: 14416

8. (Original) The method of claim 7 wherein the second saturated fat source is tallow.

9. (Currently Amended) A method of feeding an animal comprising feeding the animal a

daily feed ration comprising about 0.5 to less than about 5 percent by weight hydrogenated

poultry fat, wherein the hydrogenated poultry fat has an iodine value of greater than about 35

between about 60 and about 30.

saturated fat source.

10. (Original) The method of claim 9 wherein the animal is a pig.

11. (Original) The method of claim 10 wherein the hydrogenated poultry fat is feed to the

pig on a daily basis for at least three weeks before the pig is slaughtered.

12. (Original) The method of claim 10 wherein the hydrogenated poultry fat is feed to the

pig on a daily basis after the pig weighs at least 170 pounds.

13. (Original) The method of claim 9 wherein the only fat source in the daily feed ration is

hydrogenated poultry fat.

14. (Currently Amended) The method of claim 9 wherein the hydrogenated poultry fat has

an iodine value of greater than about 35 and less than about 45.

15. (Original) The method of claim 9 wherein the feed ration further includes a second

saturated fat source.

16. (Currently Amended) A feed ration for feeding finishing swine, the feed ration

comprising a grain and about 0.5 to less than about 5 percent by weight hydrogenated poultry fat,

wherein the hydrogenated poultry fat has an iodine value of greater than about 35 between about

30 and about 60.

Application Number: 10/607,837 Reply to Final O.A. of October 16, 2006

Docket: 14416

(Original) The feed ration of claim 16 wherein the feed ration has an iodine value of 17. about 40.

- 18. (Original) The feed ration of claim 17 wherein the hydrogenated poultry fat is hydrogenated chicken fat.
- (Original) The feed ration of claim 16 further including a second saturated fat source. 19.
- 20. (Original) The feed ration of claim 19 wherein the second saturated fat source is tallow.
- 21. (New) The method of claim 1, wherein the weight percent of the hydrogenated poultry fat varies during aging and growth of the pig.
- 22. (New) The method of claim 1, wherein the weight percent of the hydrogenated poultry fat decreases over a first, second, and third phase of a finishing diet.
- 23. (New) The method of claim 22, wherein the weight percent of the hydrogenated poultry fat is 3% in the first phase of the finishing diet, 2% in the second phase of the finishing diet, and 1% in the in the third phase of the finishing diet.
